Ron Sanches, Aimeeacute; Henec : A Focussed Issue on Competence Perspectives on New Industry Dynamics: 6 (Research in Competence-Based Management) before purchasing it in order to gage whether or not it would be worth my time, and all praised A Focussed Issue on Competence Perspectives on New Industry Dynamics: 6 (Research in Competence-Based Management):

This volume focuses on Competence Perspectives on New Industry Dynamics. Research in Competence-Based Management (RCBM) is a peer-reviewed title for the publication of papers that extend current competence-based management (CBM) theory, propose new additions to CBM theory, suggest new directions for CBM theory development, and/or apply CBM theory in research on management issues and topics.

In this sixth volume of Research in Competence-Based Management, Sanchez (Copenhagen Business School, Denmark) and Heene (Ghent U. and Antwerp U., Belgium), present seven theoretical and empirical papers on 'new industry dynamics' that are grounded in continuing work in competence theory and its application to macro-levels of industry and product-market phenomena. Topics include system interactions linking individual organizations and their strategies to industry structures emerging from the competitive and cooperative interactions of organizations in product and resource markets, the ways in which premarket technology development shape competitive context in automotive electronics, enhancing competence in business ecosystems, the micro-foundations that underlie organizational renewal in the engineering sector, strategic value creation in information and communication technology services, a model for measuring value-leverage capabilities in automotive large-scale system integrators, and industry segment effects and firm effects on firm performance in single industry firms. Distributed in North America by Turpin Distribution. --Book News Inc. Portland, OR
