Multiple Time Frames and Indicators for Position Trading By GB Dynamic (10) Timing Techniques by Colin Alexander is one of two books that have the most influence on my trading tactics. As a multiple time frame position trader, I use a confluence of indicators to identify a high probability low risk trade setup and execution in both stocks and commodities. He also shares indicator techniques that improve timing

and lowers risk. I particularly appreciated his insights on the first round of spikes (2004 - 2006) in commodity's bull market and the pricing/indicator behaviors at those extremes. The entry/exit checklists was a nice addition to my plan and will help me avoid omissions in my analysis. With the advent of high-frequency computerized trading and the gradual disappearance of Pit-Traders, position trading will prove more profitable with less psychological pressure for Traders. I highly recommend this book and if you believe Bollinger Bands, MACD, STOCH and RSI are still viable tools especially when combined together then this is the book for you. And if you combine a multi-frame approach as I have, then purchase this book with Robert Miner's High Probability Trading Strategies. Both books are modern improvements on Philippe Cahen's Dynamic Technical Analysis. TraderGB Dynamic (10)3 of 3 people found the following review helpful. Worth your time and attention By A. Horne This book was reviewed in Futures Magazine as being well worth the cost and written by a knowledgeable trader. I have found it to be one of the best, particularly the correlation of price with indicators, and the better indicators to use for your time frame. No one "thing" will ever be the Holy Grail, but this book gives you an in-depth use of the trading tools available. I have been a FX trader for over 3 years and an equity trader for over 25 years. I would highly recommend it for newbies. There is substance in this book you can use without self promotion. 0 of 1 people found the following review helpful. ok so far By Kirby Fleming not finished yet. a few typos, slim technical analysis info. hoping later techniques get better.

In just a few years, futures trading has grown from a specialized area to a major sector that is attracting pension funds, hedge funds, and other capital pools. Technological advances have led to increased globalization and around-the-clock trading, which has generated huge volumes that can be traded at minimal cost. In *Timing Techniques for Commodity Futures Markets*, expert stocks and futures advisor Colin Alexander explains how to make money in all market conditions. He shows you how to set up monthly and weekly charts with indicators that determine which markets may be worth trading. Then he shows daily and intraday charts tell you when to pull the trigger and get into a trade and stay until market action generates an exit signal. With Alexander's proven approach to evaluating markets, you'll learn how to avoid high-risk and marginal trades without sacrificing the high-potential ones. And, you'll see how informed applications of today's most effective indicators—including MACD, moving averages, stochastics, and Bollinger Bands—can help identify markets with the potential for extended moves. Through a focused examination of how money determines markets, *Timing Techniques for Commodity Future Markets* shows you how to: Define a trend Interpret who trades what and how much Set stops and get out of trades Fine-tune short-term trading Along with expert advice on such fundamental practices as building charts and reading candlestick charts, *Timing Techniques for Commodity Futures Markets* provides an insider's edge with rare information on the best chart patterns for all time frames, cyclical and seasonal forces and price rules for knowing when to pull the trigger on a trade. To illustrate real-time use, the Alexander includes two revealing case studies—one based on a prospective long position on gasoline and one based on a short position in copper.
