involved with sales should read. Dealing with everything from how to select the right prospect to spend your valuable time with; to what to say when the customer wants to talk about your price; to closing techniques this book is a virtual sales primer. I was especially interested in the chapter getting your first-time customers to that second and third order which is in my opinion one of the greatest challenges sales people face today. One on chapter the Tracys talk about the "new model of selling" which is based first of all on creating trust which as they say is the glue that holds relationships together. Then on developing a completely understanding of what the person/company wants and needs this is critical. And finally the thirds part of the "new model of selling" which is properly presenting your products or services making sure to match them perfectly to your customers' needs. As they say, "Like a hand in a glove, your solution should fit their expressed needs." The one part of the book I found very intriguing lets's say was the description of following the Japanese technique of jujutsu which means the "gentle art" or "flexible technique" for handling objections: • Do not use objectionable terms • Anticipate and address objections: if they get used to you calling attention to points of contention they will let their guard down. • Use the structure of your presentation while interlacing answers to common objections as you go along. The idea being to skip objections altogether whenever possible and go directly to the close of the sale. Very interesting indeed. There are action exercises at the end of each chapter that do a very good job of not only summarizes the chapter but asking questions designed to make the reader stop and reflect upon what she has just read. The section dealing with price objections is priceless. The authors provide a series of questions to ask the customer when he says that your price is too high. 1. Why do you say that? 2. Why do you feel that way? 3. Is price your only concern? By using these questions and then practicing the art of listening you will be able to take the customer through a process that will allow you to demonstrate the true value of your product over you competitors. Try it, I did and it works. Get this book it will serve you well. 7 of 7 people found the following review helpful. Nothing new By Phill Oliver I'm a massive Brian Tracy fan but this book was a real let down. Maybe it's my fault as I preordered the book without doing any research, but this book is just a rehash of his earlier work. Nothing new to mention, very disappointing. If you are new to Tracy then sure it's a great read but if you are a seasoned professional like myself then don't waste your money. 0 of 0 people found the following review helpful. From someone with limited sales experience By Jason I still remember those old sales jobs I had. One was going door to door cold calling for people to switch their electric bill, and the other was with vector, selling knives- on a strictly referral basis. While they both promised training, fast promotions, and "training-provided", they all boiled down to this.... "follow the script". I learned few practical communication skills. This book was a game changer for me. It actually taught me real sales skills, that go beyond "follow the script", and the rubbish catch-all advice given to cold call novices of it being "a numbers game". The truth is, becoming great in sales goes far beyond memorization and calling on as many people. You need to learn how to actually discover peoples needs, and meet them with your product. I would love to go to a brian tracy seminar, if he is still alive....
